## Keep data secure

Earn your cybersecurity degree at a time when most business is conducted online. Although the internet has made it possible for anyone to gather information about anything at any time, it's important to keep data safe and block cyber attacks. And, you will learn how to do that with the cybersecurity bachelor's program.

Here, you'll study theories, laws and protocols of network security and information systems. You will learn all of this from expert faculty who have worked hands-on in the field. At the end of your academic journey, you'll complete a capstone project with a team and serve as a consultant to address a major cybersecurity threat challenging an organization.
